

ADVANTAGE SERIES DOORS

Kwik Torque Design

Makes adjusting tension a snap.
Just 3 to 4 clicks and the door shuts and seals with ease.

Jumping off the success of the Legacy Series, CDS wanted to design a door that used the qualities of the Legacy Series with additional benefits. In 2006 the Advantage Series was born.

The Advantage Series doors were designed with a flat mullion construction which offers superior energy efficiency while still giving you an upscale style and flexibility. The flat mullion design also allowed for a wider door giving you maximum product visibility without having to increase net openings dramatically.

Not only has the Advantage Series exceeded energy standards it was also designed to offer field reversible doors** giving you the option to give your line up a look of its own.

Just like the Legacy Series, the Advantage Series comes standard with the patented Kwik Level and Kwik Torque system along with standard T8 style LED lighting and standard 27" deep non-notched shelving.

If you are looking for a step up in Energy efficiency and flexibility, the Advantage Series is what you are looking for!

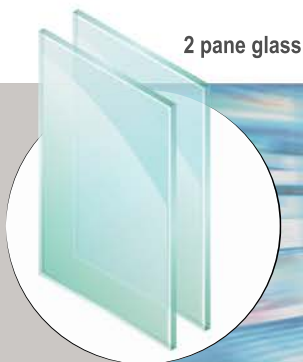

The Advantage Series is available for both coolers and freezers in many standard sizes but can also be made to fit custom openings if required.

Note: CDS is the only door company with serviceable and repairable doors when compared to the low-end throw-away non-serviceable doors offered by other companies.

**additional parts (not supplied) required at time of reversing.

Standard T8 LED Lighting Lamp with optional High Definition LED lighting available.

2 pane glass
