

POLYCARBONATE LEXAN WINDOWS

Our Lexan® Polycarbonate Sheet Windows provide a lighter weight window that has great anti-fog build-up and energy cost savings. This can be an alternative to standard glass windows with a clear, hard, scratch free surface.

The Food and Drug Administration (FDA), sets the standard for compliance, which ensures that all materials used for food contact and storage are safe, non-toxic, and free from harmful chemical substances. At CDS we offer quality plastic sheet windows, for food-processing operations without compromising the safety of your consumers and workers. Food-safe polycarbonate materials, such as our Polycarbonate Lexan Windows, are used to create safety storage production assemblies' windows in processing plants.

FEATURES:

Heating windows at -20°C uses significant amounts of energy and the compressor needs to work harder to compensate for the heated glass – resulting in a vicious energy circle. CDS provides an optimal solution with its Lexan® Polycarbonate Sheet window. This anti-fog sheet can be installed in our windows to eliminate the build-up of fog on the window. Investment in environmentally responsible solutions enables CDS to provide customers with state-of-the-art products while minimizing the impact on the environment. Contact factory for pricing.

Available in multiple thicknesses
